A QUESTION BECOMES A PATH

“Find Xarelto Net Sales and Forecast Variance analytics in Germany.”

DISCOVER
Existing candidates, with coverage

INSPECT
Definitions, ownership and model evidence

ACT
A next action with source references

Dashboard growth creates a maintenance problem.

The challenge: answer business questions while preserving ownership, KPI consistency and lifecycle control.

01 **Duplicate effort**

Similar reports are rebuilt because teams cannot confidently discover what exists.

02 **Competing definitions**

Different KPI variants can produce different interpretations of the same business question.

03 **Unclear accountability**

Ownership, refresh health and dependencies are difficult to inspect together.

04 **Migration waste**

Moving every legacy report can preserve duplication and technical debt.

Source: Since AI Bayer Challenge Brief, pp. 1–3; Governance_Rules in the supplied workbook

One request. An inspectable path to a next action.

01 Ask and discover

Describe the need naturally; inspect product, market and KPI coverage.

02 Inspect evidence

Follow IDs to owners, models, definitions, usage and dependencies.

03 Assess concerns

Four explicit checks preserve known concerns and unknown evidence.

04 Get a next action

Consider reuse, resolve concerns, or investigate coverage gaps.

INSIDE A CANDIDATE

AST-0134

Xarelto Product Performance

Owner	OWN-006 · active
Model	SM-038 · recorded refresh healthy
KPI	KPI-003 · duplicate candidate / local
Scope	Asset: Xarelto · model: Beyonttra

Recorded facts from the synthetic builder dataset

100/100 relevance.
Still needs review.

Question: Find Xarelto Net Sales and Forecast Variance analytics in Germany.

TOP CANDIDATE · AST-0134

100 / 100

METADATA RELEVANCE

Exact product and country.
Both requested KPI families linked.

THE LINKED DEFINITIONS MATTER

KPI	DEFINITION	APPROVAL
KPI-003 · Net Sales v2	duplicate_candidate	local
KPI-045 · Forecast Variance Mgmt	local_variant	local

Resolve concerns before reuse

Confirm the intended approved definitions with the metric owner.

Verified outcome: 8 candidates · 1 resolve concerns · 7 clarify or investigate

AI understands the request.
Rules keep the reasoning inspectable.

Lovable / React interface → **FastAPI backend** → **Source-linked results**

01 INTERPRET

Featherless through LangChain extracts products, markets and metrics.

Pydantic validates the structured response.

02 RETRIEVE

Parameterized SQL searches SQLite and resolves catalog terms.

Python ranks metadata coverage; the LLM does not write SQL.

03 ASSESS & GUIDE

Four explicit checks inspect ownership, refresh health, KPIs and scopes.

Versioned rules produce advisory next actions.

Excel → 24 SQLite tables

97 backend tests passed · Live end-to-end verification · No automatic asset actions

A working foundation for fewer unnecessary dashboards.

DEMONSTRATED TODAY

- Discover existing analytics from a business question.
- Make missing coverage and conflicting definitions visible.
- Trace findings to recorded evidence and source IDs.
- Provide advisory next actions while retaining human judgment.

NEXT Stable cloud hosting · Persistent human-review workflows
Deeper consolidation and migration comparisons
